component-name	xtpplib-xdoc

Table 0-1 - Parameters

Can we do something with the preface part, like using it for a home page?

1 Introduction

WARNING:

This document is for testing the features of the `xtpxlib-xdoc` component.

The `xtpxlib-xdoc` module uses DocBook 5.1 as its target vocabulary. However, it does not implement the full standard (which is huge!) but only those elements/attributes that were deemed necessary. The `xtpxlib-xdoc` component adds several extensions which are tested by running this document through the conversion pipelines. This means it also serves as partial documentation and example.
